

## Research Scientist(s) – Immunology

**Bristol, UK**

**Apitope** is developing novel therapeutic peptides to address critical unmet needs in the treatment of chronic autoimmune disorders. The company's innovative technology has attracted significant investment and forms the basis of a research, development and commercialisation agreement with a major global pharma company.

**Apitope** now has exciting opportunities for experienced and talented Immunologists to join the research team led by **Prof David Wraith** working in the field of **multiple sclerosis** and other **autoimmune diseases** to progress several discovery programmes. You must have a strong understanding of immunology and primary mammalian cell culture techniques, combined with experience of relevant models of autoimmune disease or allergy.

Successful applicants for this appointment will be educated to **PhD level** and have significant **post-doctoral experience in an immunology research environment** together with strong immunology technical competencies.

To apply, please send a copy of your CV and brief covering letter to [jobs@apitope.com](mailto:jobs@apitope.com). All applicants must be eligible to work in the UK.
